

LABORATORY RECORD

Course: Full Stack Web Development

Course Code: 23CM4121

Experiment No.: 1

Student Name: K.Vinay

Roll No.: A24126552086

Date: 31-08-2026

1. TITLE

Design and Implementation of Static Webpage using Semantic HTML

2. AIM

To develop a static webpage using raw HTML semantic components, tables, lists, and forms.

3. OBJECTIVE

The objectives of this experiment are:

- To practice document structuring with HTML5 semantics without CSS.
- To use forms to capture text inputs and configurations.
- To construct ordered and unordered lists.

4. THEORY

Semantic HTML tags (

,
,
,
,
,

) handle the structural heavy lifting of a web page, enabling clean loading and perfect accessibility compliance.

5. ALGORITHM / PROCEDURE

1. Create an HTML5 document.
2. Build the header section with navigation links.
3. Organize the main content into articles using semantic tags.
4. Implement a user inquiry form with input fields, select dropdown, and buttons.
5. Create an aside section to display references using lists.
6. Check rendering in a browser without CSS.

6. PROGRAM

staticwebpage.html

```
<!DOCTYPE html>  
<html lang="en">
```

```

<head>
  <meta charset="UTF-8">
  <title>Pure Semantic HTML Static Webpage</title>
</head>
<body>

  <!-- Header Section -->
  <header>
    <table width="100%" border="0" cellspacing="0" cellpadding="10">
      <tr>
        <td>
          <h1>StaticWeb</h1>
        </td>
        <td align="right">
          <nav>
            <a href="#home">Home</a> &nbsp;|&nbsp;
            <a href="#articles">Articles</a> &nbsp;|&nbsp;
            <a href="#about">About</a> &nbsp;|&nbsp;
            <a href="#contact">Contact Us</a>
          </nav>
        </td>
      </tr>
    </table>
  </header>

  <hr>

  <section id="home">
    <center>
      <h2>Semantic Structures Without CSS</h2>
      <p>This layout uses raw HTML components to build an organized document hierarchy that browsers can cleanly parse out-of-the-box.</p>
      <p><a href="#articles"><b>Read Our Articles Below &darr;</b></a></p>
    </center>
  </section>

  <hr>

  <table width="100%" border="0" cellspacing="0" cellpadding="20">
    <tr valign="top">

      <td width="70%">
        <main id="articles">

          <article>
            <h2>1. Core Structural Tags</h2>
            <p>Published: July 7, 2026</p>
            <p>When you omit cascading style sheets entirely, the semantic markup handles all of the structural heavy lifting. Elements like <code>&lt;main&gt;</code>, <code>&lt;article&gt;</code>, and <code>&lt;section&gt;</code> tell screen readers and web scrapers exactly how information flows.</p>
            <p>Using raw browser defaults ensures excellent loading performance, perfect accessibility compliance, and absolute structural clarity.</p>
          </article>

```

```

<br><hr><br>

<article>
  <h2>2. Native Interaction Elements</h2>
  <p>Published: July 5, 2026</p>
  <p>Browsers come equipped with excellent interactive elements by
default. We can capture text inputs, provide multiple-choice configurations, and submit
structured information to backend parsers using pure markup.</p>

  <h3>Interactive Demonstration Forms</h3>
  <form id="contact" action="#" method="post">
    <fieldset>
      <legend><b>User Inquiry Form</b></legend>
      <p>
        <label for="name">Full Name: </label>
        <input type="text" id="name" name="username" required
placeholder="John Doe">
      </p>
      <p>
        <label for="email">Email Address: </label>
        <input type="email" id="email" name="useremail" required>
      </p>
      <p>
        <label for="topic">Inquiry Topic: </label>
        <select id="topic" name="usertopic">
          <option value="general">General Feedback</option>
          <option value="technical">Technical
Architecture</option>
          <option value="academics">Academic Curriculum</option>
        </select>
      </p>
      <p>
        <label for="message">Message Details:</label><br>
        <textarea id="message" name="usermessage" rows="5"
cols="40" placeholder="Type your notes here..."></textarea>
      </p>
      <p>
        <input type="submit" value="Submit Form Data">
        <input type="reset" value="Clear Entries">
      </p>
    </fieldset>
  </form>
</article>

</main>
</td>

<td width="30%" bgcolor="#f4f4f4">
  <aside id="about">
    <h3>Document References</h3>
    <p>Static pages map data out directly without real-time database queries
or processor overhead.</p>

    <h4>Core Benefits:</h4>
    <ul>
      <li>Instant browser painting</li>
      <li>Low memory footprints</li>

```

```

        <li>High data compatibility</li>
    </ul>

    <h4>Required Components:</h4>
    <ol>
        <li>Document Type Definition</li>
        <li>Semantic Wrapper Blocks</li>
        <li>Data Input Control Interfaces</li>
    </ol>
    </aside>
</td>

</tr>
</table>

<hr>

<footer>
    <center>
        <p>&copy; 2026 Pure HTML Architecture. Assembled completely without style
configurations.</p>
    </center>
</footer>

</body>
</html>

```

7. CODE EXPLANATION

Code / Syntax	Explanation
<h2> and <p>	Creates section headings and paragraphs.
<form>, <fieldset>, <legend>	Groups interactive user input fields together semantically.
<table>, <tr>, <td>	Defines a table with rows and cells for layout formatting.
, ,	Renders numbered and bulleted reference lists.

8. TEST CASES AND EXECUTION DATA

Test Case	Input / Action	Expected Result	Actual Result	Status
TC-01	HTML Tags	Load document	Page structure visible	Pass
TC-02	Form	Type text	Inputs accept values	Pass

9. OUTPUT

10. RESULT

Thus, the static webpage demonstrating raw HTML formatting and layout handling was successfully implemented and verified.
